

# Be secured!

# SPIDER for SharePoint Permission Management

## Avantess-IAM SPIDER SharePoint Provisioning™

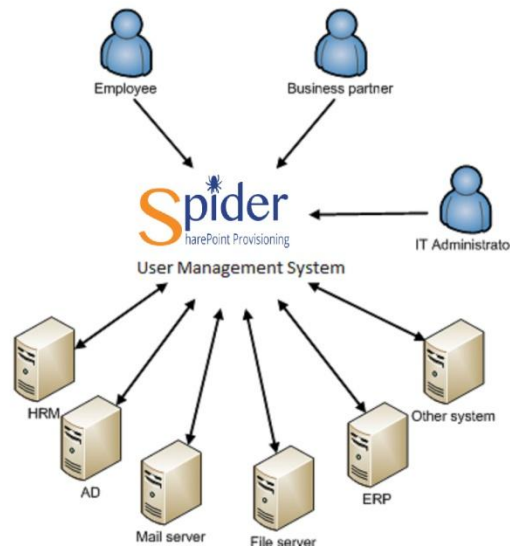

### Spider User Management Benefits:

- Free up SharePoint Administrator time
- Eliminate configuration errors
- Streamline the request process for end users
- Record all requests and changes made
- Future Proof
- Repeatable

### 60 x Less Effort in Security Management

### Tech Specs: Supported Systems

- Excel / Office 365
- SharePoint 2013 (Server & Foundation)
- SharePoint 2010 (Server & Foundation)
- SharePoint 2007 (MOSS, WSS 3.0)
- Windows Server 2003, 2008 or 2012
- SQL Server 2005, 2008 or 2012

*Save time of your site administrators to automate user permission management!*

### SPIDER

Are you running SharePoint on-premises, in the cloud, in combination with Office 365 or as hybrid SharePoint deployment? Running in single or multiple farms? Use SPIDER to manage and administer them all from one place in one console, or from many places with one application.

### The Business Case

SPIDER creates instant access for auditing and maintenance of your user permission management. For example to control your high security user population with the fastest response and efficiency. In the execution of user change management and administration activities, SPIDER is more secure and 60 x less time-consuming than manual management by the system administrator. This is based upon an average of 10 manual authorization updates per minute per user-group across multiple sites.

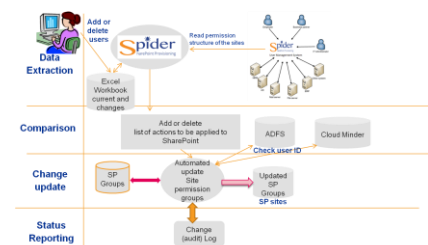

### SharePoint User Permission Management, Auditing and Reporting

#### Introduction:

User permission management in the heart of your SharePoint environment is the security base for your companies SharePoint document management system. Therefore to prevent compromises by unauthorized user access has to be one of the highest priorities in your security management processes. Standard maintenance procedures in SharePoint farms are very time consuming. To speed up this process we developed SPIDER.

### Single Console

Audit, clean-up and manage SharePoint permissions and users from SPIDER's single console across all sites, site collections, or farms. Analyze and manage all aspects of permissions across your platform whether they are directly assigned, inherited or granted through Active Directory or SharePoint groups.

### Why Avantess-IAM

Specialized in Identity and Access Management
